SUMMARY

One of three engineers on InMobi’s new AI monetization platform, there since the backend’s first commit, owning identity and the monetization surface. Put an LLM inside a live ad-approval path: it clears campaigns, humans rule on the rest, and a poller auto-pauses creatives that drift after approval. Wrote the end-to-end proof of concept for an embeddable answer surface, now a second product in development. Builds inside constraints set by someone else: another platform’s policy, a partner’s site, a client’s spreadsheet.

EXPERIENCE

Software Development Engineer · InMobi, Bengaluru Jun 2025 – present

Joined on ad compliance and content automation; on the new platform since its first day (Mar 2026), and founding engineer on a second product built on top of it.

- Shipped the **content and keyword generation surface** on Gemini and Claude with Imagen 4, behind a prompt engine with per-feed config, plus a concept-discovery service and **semantic image search over embeddings**.
- Validated campaigns against **6 ad networks’** policies before traffic reached Google, through an ad-compliance proxy in Python/FastAPI: HMAC-signed requests, Redis-backed approval state, a poller that auto-paused creative drift, a human review API, and an **LLM auto-approval layer**.
- **Rebuilt identity from scratch (IAM v3)**. Three-tier org hierarchy, roles and permissions resolved per request, SSO and JWT, invite flows. Owned end to end across the FastAPI backend and Next.js frontend.
- **Cut auth and dashboard latency ~8× on the Redis-degraded path** (2s to 0.25s per operation) via a circuit breaker, cluster client, L1 cache and N+1 elimination. Migrated image storage S3 → GCS with CDN cutover.
- Engineered a **RAG answer surface** that one script tag drops onto a publisher’s site: per-partner manifest, closed Shadow DOM isolation, origin-allowlist auth, **8 in-answer ad placements**. SDK, backend and admin console.
- Automated Meta Ads campaign creation single-handedly: a client spreadsheet becomes up to **5,000 ads**, every entity created paused so nothing spends by accident. CLI for engineers, web UI for the business team.
- Integrated **8 ad networks and feeds** with per-partner config, partnering with business teams through production testing, and handled pen-test remediation, Docker/Jenkins container builds and dbt revenue models.

Product Analyst · Glance (consumer content platform, InMobi group), Bengaluru Jun – Aug 2024

- Delivered **4 Superset dashboards** carrying **50+ charts** across the USA and Singapore clusters, including a product-alert dashboard tracking engagement deviations by OEM and region.
- Reported deep dives across **30+ metrics** to product managers fortnightly, turning the alerts into decisions the content team acted on.

AI Project Intern · IBM India Jun – Jul 2024

- Led a plant-disease detection project to **92% accuracy**, directing a team of **3 interns** through data collection, training and evaluation.
- Refined the model with agricultural experts, and ran natural-language processing research alongside it.

Research internships · IIT Delhi · DRDO 2022, 2023

- Diagnosed faults in operating PEM fuel cells using AI at **IIT Delhi** (2023), under Dr. Anil Verma.
- Simulated tactical MANET environments in NS2 at **DRDO DEAL**, presenting **10 recommendations** to the IP Based Protocols Group (2023). Electronics R&D at DRDO IRDE (2022).

Co-founder · Fintech prototype Nov 2021 – Sep 2022

- Co-founded an investment-aggregator prototype with **2 co-founders**: **3** asset classes in one account, with portfolio tracking and personalized insights.
- Owned the market research, and **sold the prototype and its IP** as an undergraduate.

SELECTED PROJECTS

- **Mercury Works** (open source, MIT · with Piyush Rane) — autonomous AI creative agency. One sentence of brief becomes a live brand: naming, design, illustration, voiceover ad, deployed site with checkout. **11 live sites in 8 hours**.
- suryanshd.github.io — this résumé’s portfolio: hand-written HTML, CSS and WebGL, no framework and no build step, scoring 100 on Lighthouse accessibility, best practices and SEO.
- **Munshi** (with Piyush Rane) — bilingual Hindi/English health-insurance claims processor. Reads handwritten medical records into insurer-format claim packets, using a **2-model agreement check that abstains instead of guessing**.

SKILLS

Languages	Python (FastAPI) · TypeScript / JavaScript · PHP (Laravel) · SQL
Applied AI	Gemini · Claude · Imagen 4 · Groq/Llama · RAG · embeddings and semantic search · prompt engineering · agent pipelines · abstention and model-agreement checks · PyTorch · scikit-learn · OpenCV
Systems & data	Next.js / React · React Native · NestJS · htmx · PostgreSQL / AlloyDB / Neon · pgvector · Redis (cluster, circuit breaker) · dbt · Server-Sent Events · Shadow DOM SDKs
Cloud & security	GCP · AWS · Docker · Jenkins · Helm · Nginx · IAM/RBAC · OAuth/SSO · JWT · HMAC · session invalidation · pen-test remediation
Ad platforms	Meta Ads API · Google Ads / AFS / RSOC · Bing · Outbrain · Taboola · MGID · Yahoo · AdSense

EDUCATION

B.Tech, Computer Science & Engineering · UPES Dehradun, 2021–2025. Coursework in AI/ML and cloud computing.

CERTIFICATIONS & RECOGNITION

Published	“Use of AI and Its Benefits on Quality Assurance (QA)” — journal of the DGQA, India’s Ministry of Defence, circulation 5,000+
Certifications	Microsoft AI-102 (Azure AI Engineer) · AWS Academy Graduate · QSim quantum computing (IIT Roorkee)
Community	Core member and event coordinator, UPES Coding Club: organized a 150+ participant hackathon · GrowthX builder community
