

Suryansh Deoli

Software Engineer · Applied AI and LLM systems in production · Bengaluru, India

suryanshdeoliofficial@gmail.com · suryanshd.github.io · github.com/SuryanshD · linkedin.com/in/suryansh-deoli-22746b212

SUMMARY

One of three engineers on InMobi’s new AI monetization platform since the backend’s first commit. Owns identity and the monetization surface, working with business teams from integration through go-live. Put an LLM inside a live ad-approval path, where it clears campaigns and humans rule on the rest. Also wrote a proof of concept for a browser-embeddable retrieval interface, front to back.

EXPERIENCE

Software Development Engineer · InMobi, Bengaluru Jun 2025 – Present

Joined on ad compliance and content automation. Moved to the new platform at its formation.

- Shipped the **content and keyword generation surface** on Gemini, Claude and Imagen 4, driven by a prompt engine with per-feed config. Added a concept-discovery service and **semantic image search over embeddings**.
- Validated campaigns against **6 ad networks’** policies before traffic reached Google. The Python/FastAPI proxy ran in production with HMAC-signed requests, Redis-backed approval state and **LLM auto-approval guarded by human-in-the-loop review**. A poller auto-paused drifting creatives.
- **Rebuilt identity and access from scratch** with multi-tenant RBAC, per-request role and permission resolution, SSO, JWT and invite flows. Owned it end to end, FastAPI backend to Next.js frontend.
- **Cut auth and dashboard latency 8x** (2s to 0.25s per operation) via a circuit breaker, cluster client, L1 cache and N+1 elimination. Migrated image storage from S3 to GCS with CDN cutover.
- **Prototyped a browser-embeddable retrieval interface end to end**, covering the client library, the backend service and an admin console.
- Automated Meta Ads campaign creation single-handedly. A client spreadsheet becomes up to **5,000 ads**, all created paused so nothing spends by accident. Gave engineers a CLI and the business team a web UI.
- Integrated **8 ad networks and feeds** with per-partner config, partnering with business teams through production testing. Handled security hardening and remediation, Docker/Jenkins container builds and dbt revenue models.

Product Analyst · Glance (consumer content platform, InMobi group), Bengaluru Jun 2024 – Aug 2024

- Delivered **4 Superset dashboards carrying 50+ charts** across the USA and Singapore clusters, including a product-alert dashboard tracking engagement deviations by OEM and region.
- Reported deep dives across **30+ metrics** to product managers every two weeks, turning the alerts into decisions the content team acted on.

AI Project Intern · IBM India Jun 2024 – Jul 2024

- Led a plant-disease detection project to **92% accuracy**, directing a team of **3 interns** through data collection, training and evaluation.
- Refined the model with agricultural experts, and ran natural-language processing research alongside it.

Research internships · IIT Delhi · DRDO 2022 – 2023

- Diagnosed faults in operating PEM fuel cells using AI at **IIT Delhi (2023)**, under Dr. Anil Verma.
- Simulated tactical MANET environments in NS2 at **DRDO DEAL** and presented **10 recommendations** to the IP Based Protocols Group (2023). Conducted electronics R&D at DRDO IRDE (2022).

Co-founder · Fintech prototype Nov 2021 – Sep 2022

- Co-founded an investment-aggregator prototype with **2 co-founders**. It combined **3 asset classes** in one account, with portfolio tracking and personalized insights.
- Owned the market research, and **sold the prototype and its IP** as an undergraduate.

SELECTED PROJECTS

- **Mercury Works** (open source, MIT, with Piyush Rane), an autonomous AI creative agency. One sentence of brief becomes a live brand with naming, design, illustration, voiceover ad and deployed site with checkout. **11 live sites in 8 hours**.
- suryanshd.github.io, a portfolio site. Hand-written in HTML, CSS and WebGL, no framework, no build step. **Scores 100 on Lighthouse** accessibility, best practices and SEO.
- **Munshi** (with Piyush Rane), a bilingual Hindi and English health-insurance claims processor. Reads handwritten medical records into insurer-format claim packets. A **2-model agreement check abstains instead of guessing**.

SKILLS

Languages:	Python (FastAPI) · TypeScript / JavaScript · PHP (Laravel) · SQL
Applied AI:	Gemini · Claude · Imagen 4 · Groq/Llama · RAG · embeddings and semantic search · prompt engineering · agent pipelines · guardrails (abstention, human-in-the-loop review, model-agreement checks) · PyTorch · scikit-learn · OpenCV
Systems and data:	Next.js / React · React Native · NestJS · htmx · PostgreSQL / AlloyDB / Neon · pgvector · Redis (cluster, circuit breaker) · dbt · Server-Sent Events
Cloud and security:	GCP · AWS · Docker · Jenkins · Helm · Nginx · IAM/RBAC · OAuth/SSO · JWT · HMAC · session invalidation · security hardening
Ad platforms:	Meta Ads API · Google Ads / AFS / RSOC · Bing · Outbrain · Taboola · MGID · Yahoo · AdSense

EDUCATION

B.Tech, Computer Science and Engineering · UPES Dehradun, 2021–2025. Coursework in AI/ML and cloud computing.

CERTIFICATIONS AND RECOGNITION

Published:	“Use of AI and Its Benefits on Quality Assurance (QA)” in the journal of the DGQA, India’s Ministry of Defence. Circulation 5,000+
Certifications:	Microsoft AI-102 (Azure AI Engineer) · AWS Academy Graduate · QSim quantum computing (IIT Roorkee)
Community:	Core member and event coordinator, UPES Coding Club. Organized a 150+ participant hackathon. GrowthX builder community
